# NOT2SEXY TO GET TESTED

Partnering with Right Said Fred, Hep C Positive and Liver4Life have launched the Not2Sexy campaign in aid of World Hepatitis Day to encourage people to get tested for hepatitis C. Hepatitis C is a blood borne virus which is transmitted by infected blood causing liver inflammation and can lead to serious liver disease and damage

## RISK FACTORS OF HEPATITIS C:

- Exposure to unsterile equipment through injecting drugs (even once) or steroids, piercing, tattooing, acupuncture, nail bars and medical work abroad where infection control is poor**
- Blood transfusions received in the UK before 1992**
- A South Asian origin who may have contracted hepatitis C from their country of origin (e.g. via contaminated blood and unsterilised needles)**
- Accidental exposure to infected blood such as healthcare workers who have experienced needle stick injury**
